Junction Blocks

Junction block surface mount systems are used to bring multiple lubrication points to a common, easily accessible location. The junction blocks provide a means for coupling lubricant feed lines to bearings with lubrication fittings. They are available in three basic design groups and may be mounted in multiple units to meet all application requirements.

Group I

Have ¹/₂₂" diameter mounting holes at 90° intervals, for use with ⁵/₁₆" diameter mounting bolts. This permits horizontal or vertical positioning of lubricant inlet passages.

Part No.	No. of Inlets	A In. / mm	B in. / mm	C In. / mm	D In. / mm	E In. / mm
13147	3	2¾ / 69.9	7/8 / 22.2	1 / 25.4	3⁄4 / 19.1	3⁄4 / 19.1
13148	6	5¾/146.1	7/8 / 22.2	4 / 101.6	3⁄4 / 19.1	3⁄4 / 19.1

Group II

Have [%]/₂" diameter mounting holes for use with ¹/₄" diameter mounting bolts. Mounting holes are perpendicular to inlet passages permitting vertical positioning only.
